

GUARDIAN CLARITY™
THE UNSEEN HERO OF MUSEUM DISPLAYS

Our glass products allow you to focus on getting the best out of the showcase itself, without having to play with lighting solutions to try to combat distracting reflections in the glass.

While it creates a physical barrier to protect the object, we then make the glass virtually disappear, leaving the precious artefact behind the glass clearly visible.

We work closely with you to ensure the best glass products are selected to meet your requirements.

Guardian Clarity can reduce reflection from 8 % to around 0.7 %, when compared to standard display glass.
